

May 21, 2019

Dear Parent or Guardian:

Meningococcal disease is a serious bacterial illness that affects the brain and the spinal cord. Meningitis can cause shock, coma and death within hours of the first symptoms.

To help protect your children and others from meningitis, Georgia law requires students be vaccinated against this disease, unless the child has an exemption.

Before starting the 2020-2021 school year, all students entering or transferring into 11th grade will need proof of a meningococcal booster shot (MCV4), unless their first dose was received on or after their 16th birthday.

If your teen has not been vaccinated against meningococcal disease, we strongly recommend getting your child vaccinated. Getting MCV4 (meningococcal conjugate vaccine) now will not only help protect your child against the ongoing threat of meningitis, it will also meet the new school entry requirement.

Ask your pediatrician or local health department about other shots your child may need including:

- the human papillomavirus (HPV) series
- the tetanus, diphtheria, pertussis shot (Tdap or Td booster)
- an annual flu vaccine; and
- catch-up immunizations, including chickenpox, MMR (measles, mumps, rubella) and hepatitis B.

If your child does not have health insurance or their health plan won't cover these vaccines, call your local health department and ask about getting no or low cost vaccines. For more information, visit <http://dph.georgia.gov/vaccines-children> or call (800) 848-3868.

Sincerely,

A handwritten signature in blue ink that reads 'Kathleen E. Toomey, MD, MPH'.
